

Lenses can be replaced, but we want to ensure that you get legendary mileage out of each one. Here are some care instructions for your NATIVE goggle lenses.

- Never use solvent or glass cleaner to clean your goggle lenses. The chemicals can remove the various lens coatings that make native lenses perform so well in the snow.
- When you have snow or moisture on your lenses always use the provided microfiber pouch. Since snow's crystalline form can scratch goggle lenses, shake off as much snow as possible before wiping gently. Whenever possible allow the lenses to dry naturally.
- We have taken extensive measures to keep fog from forming on your native goggle lenses. In the event that fog does form on the interior of your lens, use only the microfiber cloth provided with your goggles. If you can allow them to dry naturally, the safest way to ensure the clarity of your lens is to avoid touching the interior at all.
- Use the goggle pouch provided when goggles are not in use.
- When storing your native goggles, make sure they are not under stress. Storing under stress can cause the frame and foam to deform.

Thank you for choosing **NATIVE Eyewear.**
